

SAMPLE AUDIT - Synthetic Website

SEO audit evidence - HTTP HTML fallback

This is a sampled audit, not a complete index of the website. AEO, entity, GEO and crawler scores use the first successfully fetched page; technical, authority and reputation summaries use the crawl sample. Scores are internal heuristics, not rankings or measured AI visibility. Content length is not semantic relevance. Parsed JSON-LD is not schema eligibility validation. Search volume, rankings, backlinks, GBP performance, conversions and AI citations are not measured unless supplied and verified separately. Generic meta robots and URL-specific robots.txt rules are inspected; HTTP X-Robots-Tag, bot-specific meta, WAF, login and actual index status require separate checks. Crawl response timing is not Core Web Vitals; use PageSpeed separately. The crawler follows in-site links to the chosen limit and does not establish orphan-page or full sitemap coverage.

Website: https://demo.example
Client: DEMONSTRATION ONLY - synthetic pages
Audit date: 2026-10-07 10:46 UTC
Prepared by: SEO Audit Suite - sample

65/100	49/100	57/100	53/100
Overall SEO Health	AI Search Audit	AEO Intelligence 2.0	GEO
55/100	85/100	40/100	20/100
Entity	Crawler Access	Authority	Reputation

Executive Summary

The audited site achieved an **AI Search Audit Score of 49/100** with **Developing** readiness. The crawl covered 2 page(s), with 50% structured-data coverage, an average of 44 extracted word tokens per page and 2 unique internal destinations.

- Sample: 2 pages; first-page AI checks: https://demo.example/; mode: HTTP HTML fallback.
- Model-identified review areas: Content Strategy, Internal Linking / Information Architecture, Reputation / Social Proof.
- Stronger heuristic signals: AI crawler accessibility.
- Secondary improvement areas include Authority / Trust Foundations, Entity SEO / Structured Identity, AEO / Answer Optimization.
- The 30/60-day roadmap prioritizes observable technical, content, entity, authority and reputation signals; rankings and AI citations should be tracked separately.

AI Search Signal Breakdown

Signal	Score	Weight
AEO readiness	57/100	25%
Entity clarity	55/100	15%
AI crawler accessibility	85/100	15%
Structured data coverage	70/100	10%
Content length proxy	10/100	10%
Internal architecture	10/100	10%
Authority foundations	40/100	10%
Reputation foundations	20/100	5%

Traditional SEO Scorecard (legacy checklist components)

Category	Score
Technical SEO	75/100
On-Page SEO	70/100
Performance	100/100
Schema	50/100
Image SEO	100/100
Social Metadata	0/100
Legacy AEO Checklist	50/100

Model-Based Review Prompts

1. HIGH - Content Strategy

Finding: Content length proxy is currently 10/100 in the AI Search Audit model.

Why it matters: Useful intent-matched page content gives search and AI systems more evidence to interpret, summarize and answer from.

Recommended SEO Action: Review search intent and usefulness manually; expand only where information is missing. Word count alone is not a quality diagnosis.

Audit evidence: 10/100 signal score; 10% weight in the AI Search Audit model.

2. HIGH - Internal Linking / Information Architecture

Finding: Internal architecture is currently 10/100 in the AI Search Audit model.

Why it matters: Clear contextual internal linking improves discovery, topical relationships and navigation between important pages.

Recommended SEO Action: Improve contextual internal linking between priority categories, products, services and supporting content.

Audit evidence: 10/100 signal score; 10% weight in the AI Search Audit model.

3. HIGH - Reputation / Social Proof

Finding: Reputation foundations is currently 20/100 in the AI Search Audit model.

Why it matters: Verifiable social proof and reputation evidence can reinforce trust and brand credibility.

Recommended SEO Action: Strengthen verifiable review, testimonial, profile and reputation evidence where appropriate.

Audit evidence: 20/100 signal score; 5% weight in the AI Search Audit model.

4. MEDIUM - Authority / Trust Foundations

Finding: Authority foundations is currently 40/100 in the AI Search Audit model.

Why it matters: Transparent identity, editorial ownership, source references and trust pages help users and machines understand who is responsible for the site and content.

Recommended SEO Action: Strengthen About, editorial ownership, citation and trust-policy signals across the site.

Audit evidence: 40/100 signal score; 10% weight in the AI Search Audit model.

5. MEDIUM - Entity SEO / Structured Identity

Finding: Entity clarity is currently 55/100 in the AI Search Audit model.

Why it matters: Consistent business and entity identity helps search and AI systems connect the brand, organization, location and site content.

Recommended SEO Action: Strengthen business/entity definition with consistent identity signals and appropriate structured data.

Audit evidence: 55/100 signal score; 15% weight in the AI Search Audit model.

6. MEDIUM - AEO / Answer Optimization

Finding: AEO readiness is currently 57/100 in the AI Search Audit model.

Why it matters: Clear question targeting and concise direct answers make important content easier to interpret for answer-oriented search experiences.

Recommended SEO Action: Strengthen question-led sections and concise answer-first responses on priority pages.

Audit evidence: 57/100 signal score; 25% weight in the AI Search Audit model.

7. OPPORTUNITY - Structured Data

Finding: Structured data coverage is currently 70/100 in the AI Search Audit model.

Why it matters: Relevant structured data provides machine-readable context for entities and eligible content types.

Recommended SEO Action: Expand valid page-appropriate Schema.org coverage across priority templates and content types.

Audit evidence: 70/100 signal score; 10% weight in the AI Search Audit model.

Page-Level Evidence & Acceptance Criteria

SEO-001 - Medium - Missing meta description

URL: <https://demo.example/services.html>

Evidence: No description value extracted

Confidence: Observed

Action: Add an accurate page summary where appropriate.

Owner: SEO / Content

Acceptance: Description is present and reviewed for accuracy.

SEO-002 - High - Malformed JSON-LD

URL: <https://demo.example/services.html>

Evidence: Unparseable blocks: 1

Confidence: Observed

Action: Repair JSON syntax, then validate relevant schema properties separately.

Owner: Developer

Acceptance: JSON parses; relevant schema passes the selected validator.

First 30 Days - Foundation & Critical Gaps

1. Strategy Priority: HIGH - Entity SEO / Structured Identity

Recommended SEO Action: Strengthen business/entity definition with consistent identity signals and appropriate structured data.

Why it matters: Clear entity identity helps systems connect the brand, organization, location and site content.

Success signal: Entity score improves and structured identity evidence is consistently detected.

2. Strategy Priority: HIGH - AEO / Answer Optimization

Recommended SEO Action: Create and refine question-led sections with concise answer-first responses on priority pages.

Why it matters: Direct, self-contained answers improve answer-engine readability and content usefulness.

Success signal: More meaningful questions have verified nearby direct answers and stronger answer-quality scores.

3. Strategy Priority: MEDIUM - Internal Linking / Information Architecture

Recommended SEO Action: Improve contextual internal linking between important categories, services, products and supporting content.

Why it matters: Clear internal relationships help discovery, context and topical navigation.

Success signal: Priority destinations receive stronger contextual internal-link coverage.

4. Strategy Priority: MEDIUM - Content Strategy

Recommended SEO Action: Review search intent and usefulness manually; expand only where information is missing. Word count alone is not a quality diagnosis.

Why it matters: Substantive page content gives search and AI systems more evidence to interpret and answer from.

Success signal: Priority pages show stronger useful-content depth and clearer intent coverage.

Days 31-60 - Expansion, Authority & Validation

1. Strategy Priority: MEDIUM - Authority / Trust Foundations

Recommended SEO Action: Strengthen About, editorial ownership, source/citation and trust-policy signals across the site.

Why it matters: Authority foundations help users and machines understand who is responsible for the content and business.

Success signal: More authority evidence is detected consistently across crawled pages.

2. Strategy Priority: MEDIUM - Reputation / Social Proof

Recommended SEO Action: Strengthen verifiable review, testimonial, profile and reputation evidence where appropriate.

Why it matters: Independent and on-site reputation signals can reinforce trust and brand credibility.

Success signal: Audit detects stronger social-proof and reputation evidence without relying on unsupported claims.

3. Strategy Priority: OPPORTUNITY - AEO Content Expansion

Recommended SEO Action: Expand high-value question coverage around commercial, informational and support intents.

Why it matters: Broader answer coverage can improve the site's usefulness for answer-oriented discovery.

Success signal: Question coverage and direct-answer completeness improve across priority content.

4. Strategy Priority: OPPORTUNITY - Measurement & Validation

Recommended SEO Action: Re-run SEO, AEO, GEO, entity, crawler, authority and reputation audits after implementation and compare evidence changes.

Why it matters: A repeatable evidence baseline is needed to distinguish implementation progress from assumptions.

Success signal: Updated audits show documented signal improvements; rankings or AI citations are tracked separately in external platforms.

Scope & Methodology

This report is generated from the recorded crawl mode and application-defined SEO/AEO/GEO/entity/crawler/authority/reputation models. Scores summarize observable signals in this run and are designed for prioritization and client communication.

The report does not represent an official Google, OpenAI, Bing, Perplexity, Moz, Ahrefs or Semrush score. It does not guarantee rankings, traffic, conversions or AI citations. External performance, backlink, review and ranking data should be validated in the relevant third-party platforms.
